HISTORY

Requires Changes

2 SPECIFICATIONS REQUIRE CHANGES

You have done a Great Job! 🙌 🌟

You are close to the appropriate project 😊

Just few more steps ✌️

Keep up the hard work 💪 🍷

Responsive Design

All content is responsive and displays on a range of display sizes.

Content should make use of available screen real estate and should display correctly at all screen sizes.

An image's associated title and text renders next to the image in all viewport sizes.

The homepage is responsive but the `restaurant.html` page is not responsive in all the `viewports`. The map is overlapping other contents on the page. 📍

Make it responsive by making use of media queries. In smaller screens, put the map on the 1st row and other elements after that as given in the project rubric.

Images in the site are sized appropriate to the viewport and do not crowd or overlap other elements in the browser, regardless of viewport size.

On the main page, restaurants and images are displayed in all viewports. The detail page includes a map, hours and reviews in all viewports.

Accessibility

All content-related images include appropriate alternate text that clearly describes the content of the image.

Focus is appropriately managed allowing users to noticeably tab through each of the important elements of the page. Modal or interstitial windows appropriately lock focus.

Elements on the page use the appropriate semantic elements. For those elements in which a semantic element is not available, appropriate `ARIA roles` are defined.

- Use `h2` or `h3` instead of `h1` for all the headings except the 1st heading to make it semantically correct.

Check out the code review for more details.

Offline Availability

When available in the browser, the site uses a service worker to cache responses to requests for site assets. Visited pages are rendered when there is no network access.
